

Punctuation marks in instant messaging influence how we understand writer attitudes for positive words, but less so for negative words!

Expressive Punctuation: Punctuation Marks as Cues to Referent Valence in Digital Communication

Background: Prior literature on expressive punctuation is predominantly qualitative. Quantitative experimental data is needed to adjudicate among prior proposals regarding the function of punctuation marks in CMC

Result: Perceived valence of discourse referents in exclamative clause as influenced by (1) isolated valence and (2) message-final punctuation mark, predicted by a generalized additive mixed-effects model

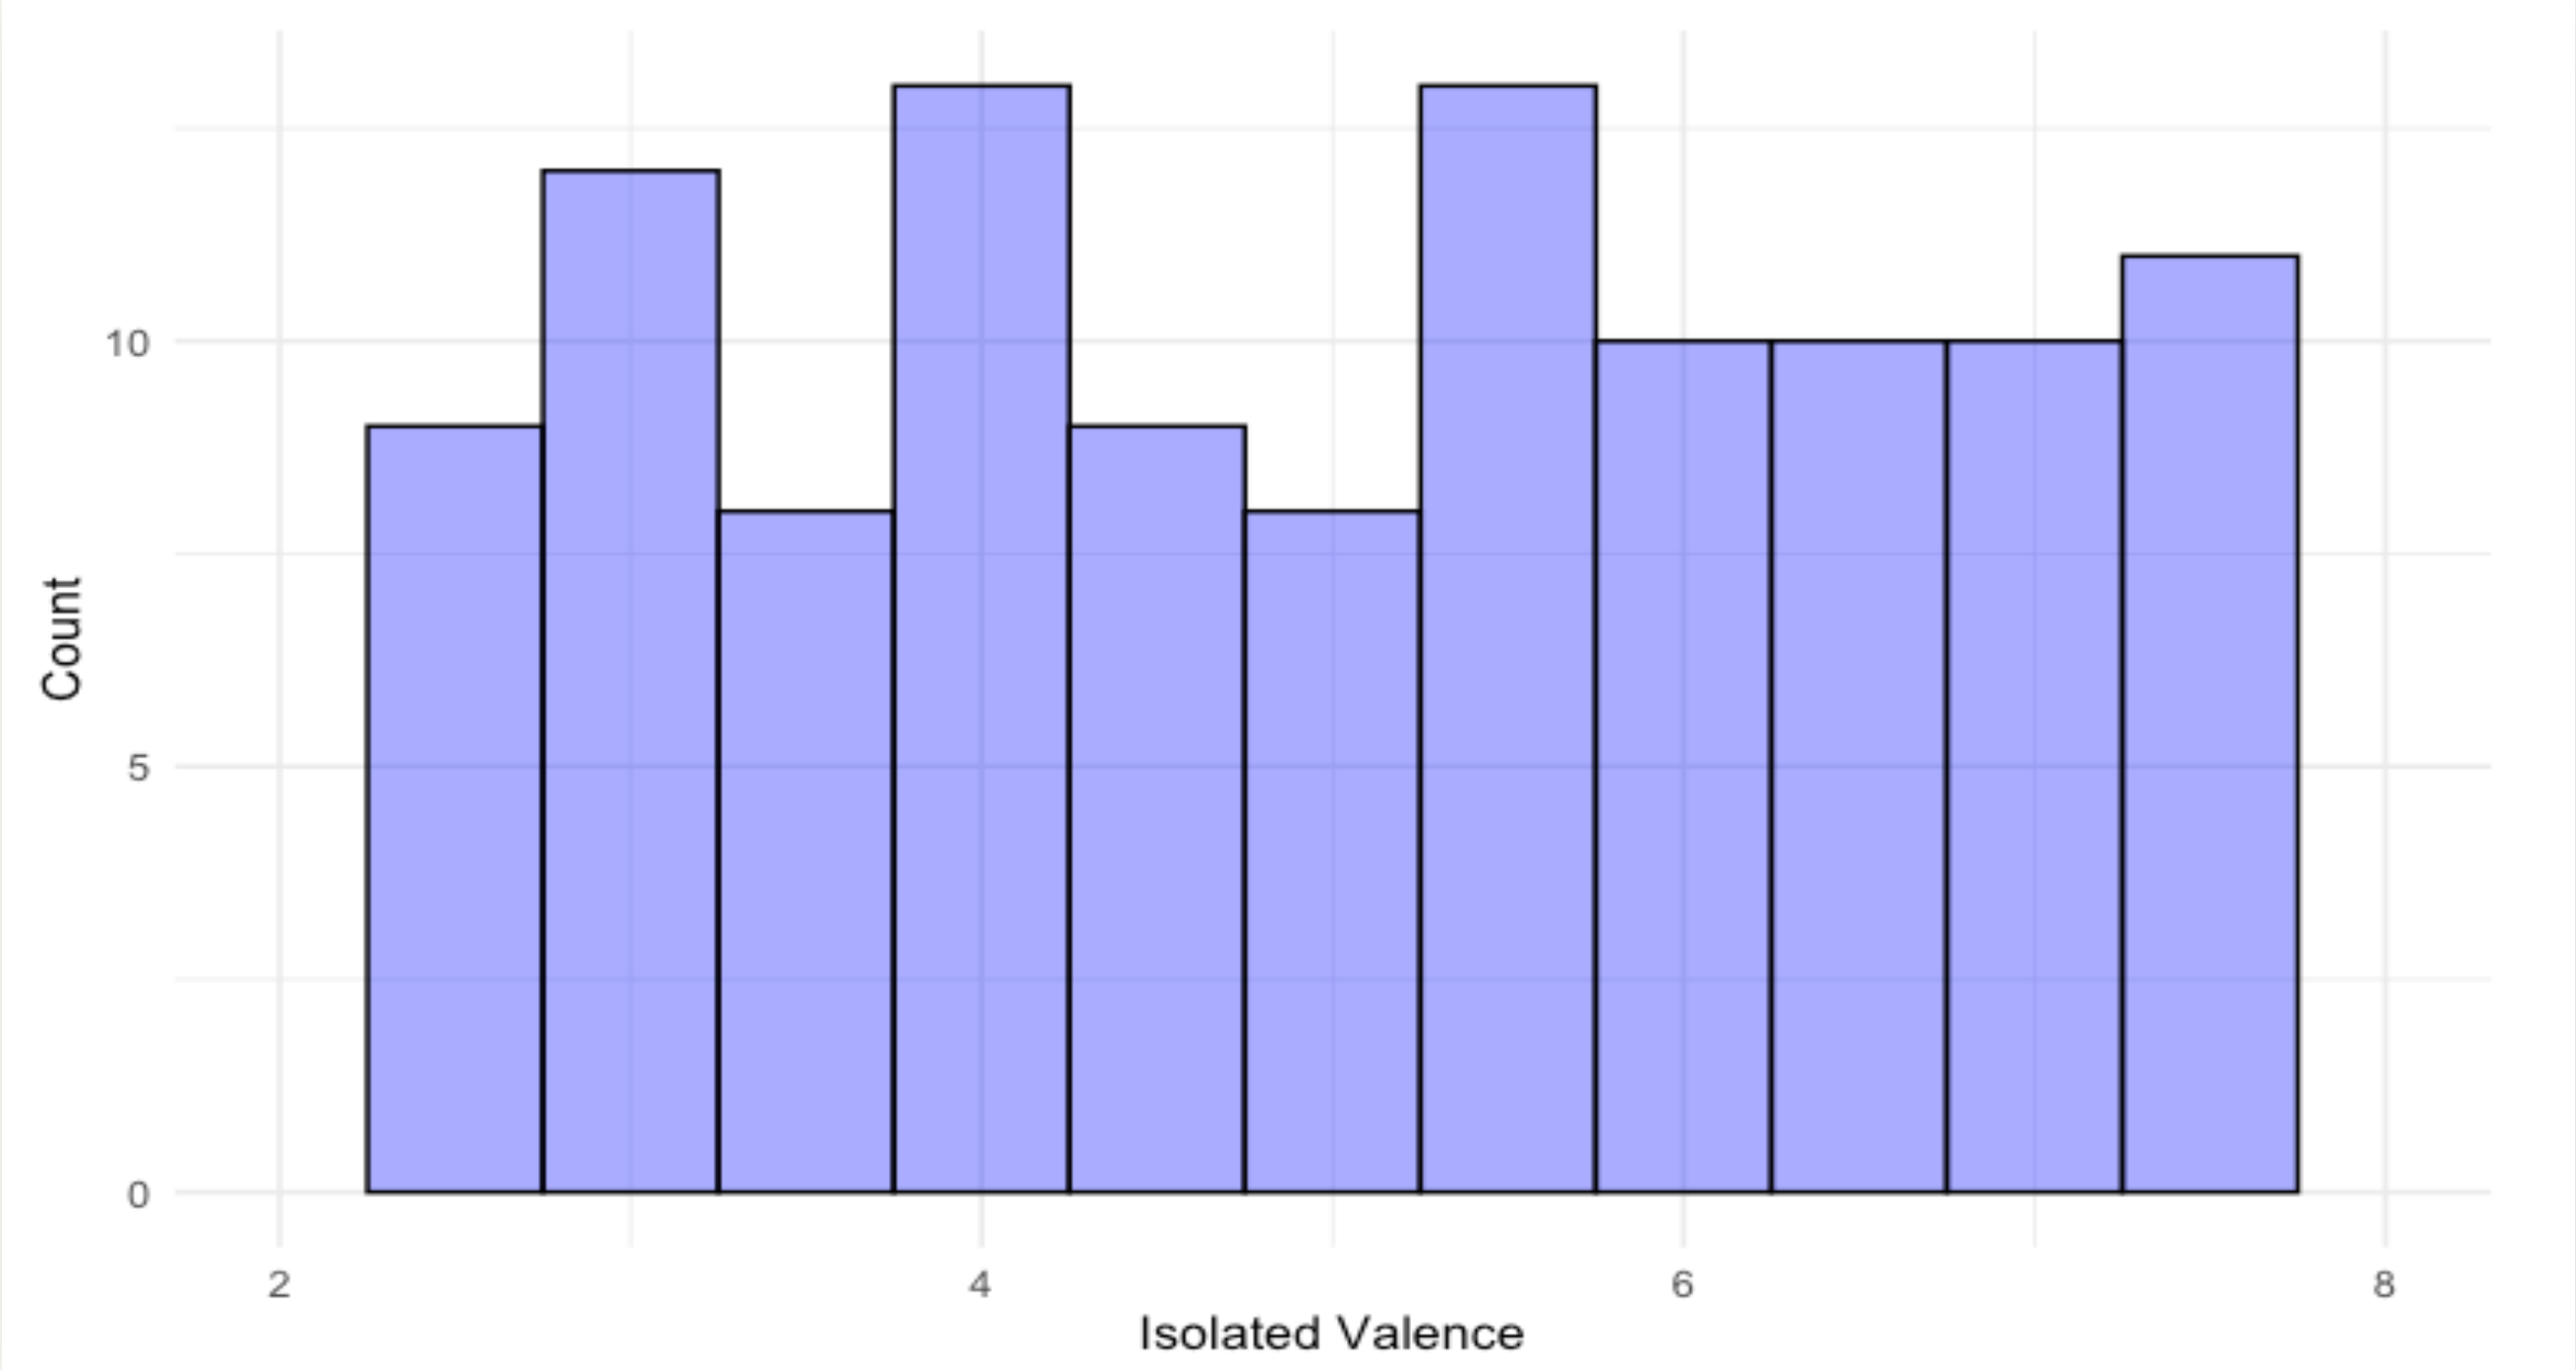

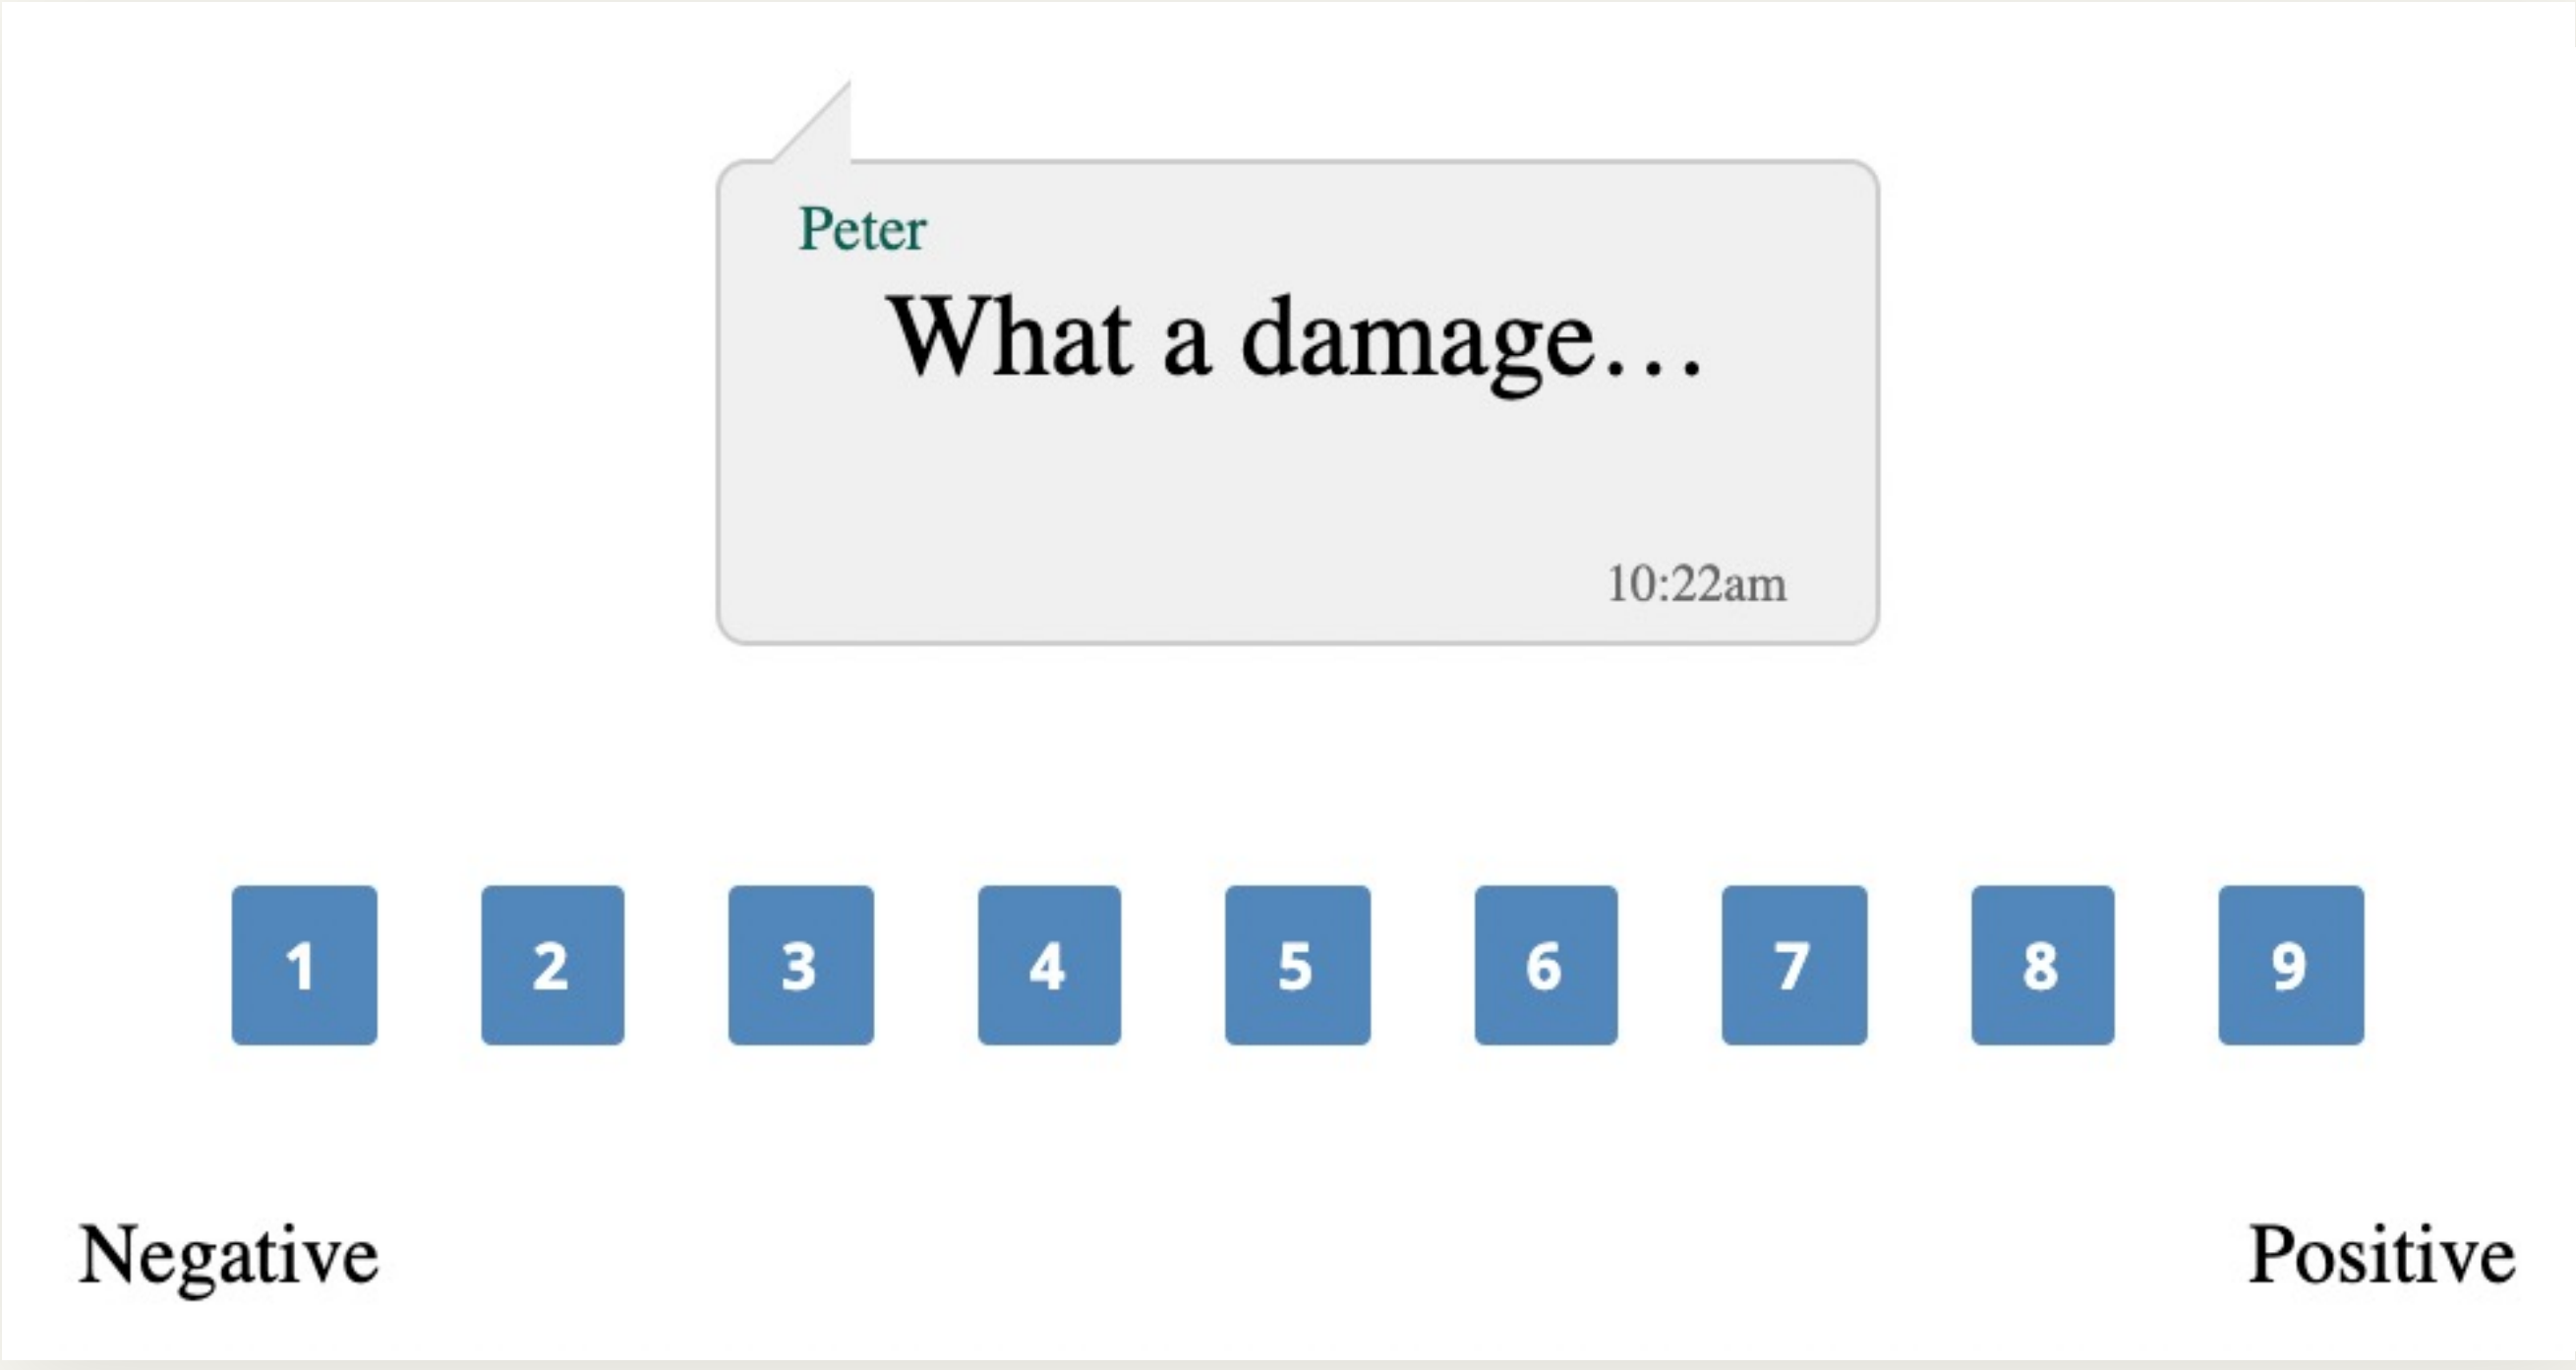

Method

Valence rating study (n=196)

1x5 between-subjects design

120 experimental items

Normed valence ratings
